

Please ensure you select the correct Firmware update for your DVR model. The second column on this PDF sheet is titled Models, Scroll down the Models column until you locate your DVR model. Once you have located your DVR model, move directly to the far right of the PDF sheet until your mouse is hovering over the red download icon, located in the URL column. Left click your mouse button on this red download icon, to start the download process. You should now see on your screen a new dialogue window open up, left click on the "Save File" radio button, now click the OK button to start the download process. The file will now download into your elected folder for your browser.

We now need to copy the Firmware file onto a USB Thumb Drive. Place your Thumb Drive into the computers USB port. We will begin the decompressing and saving of this Firmware file.

All of the Firmware files on this PDF sheet are compressed in a .zip file. There is one file within this compressed file, All that is required is to double click your mouse on this compressed file and a new window will open up. All you then need to do is right click on the new ( xxx.fw ) file, ( the file name should be the same as the file name in the PDF sheet ) and select Copy from this drop down list, by left clicking the mouse button on Copy. Now select and open your USB Thumb Drive, again right click on this drive, and left click the mouse on the Paste option. This process will copy the Firmware file from your computer onto your USB Thumb Drive. You are now ready to safely remove the Thumb Drive, and insert it into a USB port in the DVR. Now follow the correct procedure for your DVR Firmware update.
